

ABSTRACT OF THE DISCLOSURE

A vertical Venetian blind comprises a head rail, a first end cover, a second end cover, a control seat, a plurality of slat transmission seats, a plurality of link pieces, and a transmission shaft. The control seat, the slat transmission seats, the link pieces, and the transmission shaft are assembled together as a whole and can be therefore separate together from the head rail in the event that the head rail must be adjusted in length. The slat transmission seats can be easily adjusted in number. The transmission shaft can be adjusted in length accordingly.
